## Introduction

This document defines the “White List”; the file extensions that Docman software accepts. These file types are considered safe to use in both Docman and Windows.

Please note that inclusion of a file type on this list is not a guarantee that the file cannot contain viruses, malware or other malicious content. Docman strongly recommends that files are screened by a reputable, regularly-updated virus scanning software package.

A corresponding File Type Black List document is available and specifies the file types that Docman will not accept for security reasons.

# White List

Text Files		Recommended
<a href="#">.doc</a>	Microsoft Word Document
